

FOR IMMEDIATE RELEASE:

The KSI San-a-Key® Healthcare Technology System Debuts at HIMSS 2015 Conference

April 10, 2015

The most advanced software system to track hospital acquired infections from keyboards and help prevent cross contamination.

San-a-Key® Healthcare Technology System is the most advanced method for assisting with infection control and the prevention of cross contamination with the patented easy-to-clean button. It initiates the process to disinfect the keyboard surface before and after use. No need to remove the most valuable electronic health records tool, your keyboard, from service to wash in a sink or dishwasher. Prevent cross contamination in real time, improve work flow, enhance user experience and aid in the infection control process.

What truly sets the San-a-Key® System apart from any infection control product, is its real-time analytics, that gives infection control professionals the ability to know when a keyboard surface was cleaned, by whom and at what workstation, throughout the entire hospital. The most unique feature of this patented software is its ability to push desktop reminders to all clinicians that the keyboard they are about to use is in need of disinfecting.

KSI will be demonstrating the new San-a-Key® System at this year's HIMSS Conference at McCormick Place Chicago, April 13-16, 2015 (**Booth 3253**).

The San-a-Key® Analytic Software aids in spotting trends that can be missed by manual infection prevention systems. It enables continuous monitoring, with real time alerts and timely analysis of disinfection policies and procedures. It delivers configurable workflow tools to address current and future infection prevention requirements.

“The keyboard is perhaps the biggest culprit when it comes to cross contamination. The San-a-Key® system allows clinicians and hospital administrators to spend less time on analyzing and documenting infection control methodology and more time on direct intervention and educational effort,” stated Phil Bruno, CEO of KSI.

About KSI

Key Source International is a global company with offices in Oakland, California and has over 30 years of experience delivering high-end hardware and software technology solutions to Fortune 1000 companies, healthcare providers and system integrators worldwide. KSI's partners in healthcare include, Imprivata, Caradigm, HealthCast, Epic, Aventura, CDW Healthcare and BioKey. From retail automation, banking, telecommunications, healthcare and patient privacy, KSI's focus has always been enhancing the user

experience, securing the desktop and meeting tough government regulations. Visit us
