

**FOR IMMEDIATE RELEASE:**

## **KSI Releases New Wireless Infection Control Keyboard for Healthcare**

**The perfect productivity tool that offers desktop infection control and the flexibility of wireless connectivity**

San Leandro, CA – March 28, 2023 – Just in time for HIMSS23 in Chicago, KSI Keyboards, a leading provider of medical-grade keyboards, is excited to announce the release of its latest innovation for healthcare, the KSI-1801W SX wireless infection control keyboard.

The new keyboard is designed to assist healthcare professionals work more efficiently with wireless connectivity and KSI's patented keyboard cleaning system – making it the ideal solution for clinicians who use mobile medical carts and require a keyboard that is both versatile and convenient.

“We’re thrilled to add a wireless option to our popular KSI-1800 series,” said Product Manager Deanne VanKirk. “By giving healthcare workers the ability to connect wirelessly, we’re empowering them to maximize workflow, which is so crucial in today’s healthcare environment.”

The new KSI-1801W SX keyboard features three connection options – wireless RF receiver, wireless Bluetooth, and wired USB cable – providing users greater flexibility, freedom, and mobility. The wireless connection allows for easy movement and repositioning of the keyboard, while KSI's award-winning LinkSmart® cleaning button with San-a-Key® software reduces the risk of cross-contamination from shared work surfaces.

The keyboard's crevice-free silicone surface can be disinfected with wipes, sprayed with cleaners, and scrubbed with soap. A simple push of KSI's LinkSmart® cleaning button is all it takes to temporarily disable keys while an end user disinfects the keyboard surface. San-a-Key® software's onscreen, animated keyboard schematic then guides keyboard cleaning until the entire surface is clean. Hospital administrators can count on user-defined, scheduled cleaning options and pop-up reminders pushed to all desktops to ensure KSI keyboards are kept clean 24/7.

The KSI-1801W SX is compatible with thin and zero clients, as well as Windows 11.

“Clinicians need tools that help them perform their jobs more effectively,” Ms. VanKirk continued. “With the KSI-1801W SX keyboard, we’ve created a product that delivers on both fronts. Whether you’re working in a hospital, clinic, or oral care setting, this keyboard is the perfect choice for reliable and efficient data input.”

The KSI-1801W SX wireless infection control keyboard is available now from authorized KSI resellers. For more information about this product, visit <https://ksikeyboards.com/items/ksi-1801w-sx-w/>

## About KSI Keyboards
