

FOR IMMEDIATE RELEASE:

KSI Introduces a Biometric RFID Integrated Solution for ePrescribe at 2015 HIMSS Conference

April 10, 2015

The KSI-1900 DuoID pod meets DEA compliance for electronic prescriptions for controlled substances as well as New York state newly mandated I-STOP.

These regulations provide pharmacies, hospitals and practitioners with the ability to use modern technology to safely and securely issue prescriptions, meet HIPPA compliance and protect patient privacy. The KSI-1900 DuoID pod includes a FIPS 201 (Federal Information Processing Standard) certified biometric sensor and the Wave ID® dual band PcProx RFID badge reader. These two integrated devices along with approved EHR or security software create a compliant and secure way to meet the new DEA ePrescribe regulations.

"The 1900 DuoID pod along with its highly successful predecessor, the KSI-1700 integrated keyboard system, gives hospitals and pharmacies the ability to have a clean efficient solution integrated into one elegant desktop device," says Phil Bruno, President and CEO. No matter which device you select KSI delivers a cost-effective, strong, dual factor authentication solution to meet the challenges of the complex world of Electronic Health Records and the growing need for privacy and security." All of KSI's integrated solutions will be on display at the 2015 HIMSS conference at Chicago's McCormick Place, April 13-16, **Booth #3253**.
