

KSI Keyboards Recognized for Healthcare Network Security Innovation in 2025 MedTech Breakthrough Awards Program

Prestigious International Annual Awards Program Honors Standout Digital Health & Medical Technology Products and Companies

SAN LEANDRO, Calif., – May 8, 2025 – [KSI Keyboards](#), a leading provider of advanced healthcare keyboard solutions, today announced that it has been selected as winner of the **“Best Healthcare Network Security Solution”** award in the **9th annual MedTech Breakthrough Awards** program conducted by [MedTech Breakthrough](#), an independent market intelligence organization that recognizes the top companies, technologies and products in the global digital health and medical technology market.

The 2025 MedTech Breakthrough Award recognizes the breakthrough innovation of KSI’s AuthentiKey™ KSI-2100 HRPB-23 keyboard, an endpoint security device for healthcare that provides secure, passwordless access control, compliance and productivity. Designed with a focus on full-circle security – from user authentication to automated logoff – the keyboard protects data and controls physical access in medical environments.

The solution addresses data security compliance with an effective suite of security features. Integrated Type A and Type C passkey ports on top of the keyboard provide easy user access to accommodate a range of security keys for user authentication – including FIDO®-compliant keys and other popular keys. FIDO®-certified keys or cards ensure compliance with FIDO®. A dual-frequency NFC reader facilitates secure, contactless badge authentication and allows for MFA when used with a passkey or biometric smart card.

The KSI-2100 HRPB-23 is also compatible with leading SSO platforms such as Imprivata® and AuthX, seamlessly integrating into healthcare IT ecosystems through Windows, macOS, Linux, and IGEL. Passwordless authentication prevents unauthorized access due to lost or stolen credentials, eliminates the need for users to remember passwords, and negates cumbersome and costly password administration.

“We designed the KSI-2100 HRPB-23 to maximize productivity, ensuring compliance with privacy regulations and minimizing the risk of data breaches in fast-paced healthcare environments. In addressing critical challenges in healthcare, the medical staff can shift their focus on delivering exceptional care,” said Deanne Van Kirk, KSI National Sales Manager. “Thank you to MedTech Breakthrough for this recognition! We’ll continue along our journey to empower healthcare to save patient lives, increase productivity, and protect consumer data by providing high quality, innovative clinical desktop security and infection control peripherals.”

The MedTech Breakthrough Awards program celebrates excellence and innovation in the health and medical technology industry, recognizing the companies, products, and solutions driving meaningful progress and improving patient care. Spanning a wide range of categories—including Telehealth, Clinical Administration, Patient Engagement, Electronic Health Records (EHR), Virtual Care, Medical Devices, Medical Data & Privacy, and beyond—the awards highlight the groundbreaking work that is transforming the healthcare landscape.

This year's program saw a record-breaking number of nominations from leading companies and startups across more than 18 countries, showcasing the global impact and momentum of the digital healthcare industry today.

"The KSI-2100 HRPB-23 distinguishes itself by solving real-world problems in healthcare, empowering healthcare teams to focus on patient care without sacrificing desktop security. Medical environments require robust authentication to safeguard sensitive patient data and maintain compliance with strict regulations while also demanding efficiency and accuracy," said Steve Johansson, managing director, MedTech Breakthrough. "The KSI-2100 HRPB-23 is a unique security tool that empowers hospitals to safeguard sensitive data while improving workflows and ensuring secure, efficient, and compliant healthcare operations. Congratulations on being our pick for 'Best Healthcare Network Security Solution!'"

Additionally, auto-logoff prevents unauthorized access at active and vacant workstations – the keyboard's integrated PresenceLock™ human presence detection technology automatically locks PCs when users leave their workstations. This walkaway auto logoff feature prevents phishing attacks and unauthorized access to EHR and other sensitive information. Presence detection zones are easily set by IT without the need for software. Lastly, workflow optimization data input is effortless and low-profile keys speed workflow.
