

USE CASE

Securing Hot Desking Environments in the Enterprise

Hot desking gives organizations the agility to adapt. Employees move, collaborate, and connect wherever work happens. But in these dynamic environments, the organization can suffer from gaps in security. The KSI-2400 HRB-24 brings strong, frictionless authentication and PresenceLock™ technology to every shared workstation — providing protection before, during, and after the session.

KSI-2400 HRB-24

Monitor-Mounted Device with Contactless RFID and PresenceLock™

CHALLENGE

Hot desking improves space utilization and flexibility but also introduces security gaps:

- Users forget to log out of active sessions
- Workstations remain accessible after employees walk away
- Badge-based login does not confirm continued user presence
- IT lacks control over session security in dynamic environments

RISK

- Exposure of sensitive corporate data (financials, HR records, internal systems)
- Unauthorized actions performed under a valid user session
- Compliance concerns tied to unattended access
- Increased insider threat surface in shared environments

SOLUTION

The KSI-2400 HRB-24 device brings secure authentication to the shared workstation.

Contactless RFID

Fast, tap-and-go login for seamless user transitions between desks

Compact Design

Positions authentication within eye level where users naturally engage

PresenceLock™ Continuous Security

Automatically locks the workstation when the user is no longer present

OUTCOME

Eliminates unattended active sessions

Strengthens security in shared environments without adding friction

Aligns with Zero Trust principles (verify continuously, not just once)

Improves user experience while reducing IT risk

IDEAL PLACEMENT

Corporate offices with hot desking or hoteling

Financial institutions with shared analyst workstations

Agency offices with rotating personnel

Call centers and operations floors / back offices

PresenceLock™ in Action: HOT DESK WORKFLOW

1 USER ARRIVES AT A DESK

User taps the 2400's integrated rf IDEAS WaveID® Plus proximity card reader to authenticate.

2 SESSION IS ACTIVE

User is logged in and working. PresenceLock continuously verifies the user's presence via integrated sensor.

3 USER STEPS AWAY

Within seconds, PresenceLock detects that the user is no longer present at the workstation.

4 AUTOMATIC LOCK

The workstation is automatically locked to protect the active session and prevent unauthorized access.

5 NEW OR EXISTING USER AUTHENTICATES UPON ARRIVAL

User taps their badge to unlock the PC and authenticate. Full-circle endpoint security.

Effective enterprise security protects the session — not just the login.
